

## Quick-facts on the **QUICKFLASH**

Dramatically reduces print times!

Deeper and darker images!

Double your output!

Increases production.

Perfect for post-curing color copy images.

Better results.

Improves washability.

Ideal for preheating mugs.

Small, clean, compact and simple.

Attaches easily to new or existing Genny 200 mug press.

The **QUICKFLASH** unit is an innovative accessory attachment for the Genny 200 mug press. The **QUICKFLASH** unit attaches to the rear section of the Genny 200, working in tandem for maximum mug printing productivity. It achieves this increased production by allowing you to preheat or post-cure your mugs. By preheating the mug, you are able to process two mugs concurrently, and it has been found that post-curing is a necessity in successfully transferring color copy images onto mugs. The **QUICKFLASH** does this efficiently by utilizing a high energy quartz lamp. This effective technique heats the mug from the inside out, insuring even heating and a permanent 'baked-on' image.
