

## Digital Combo

# Full Wrap Mug Attachment Instructions

1. Unplug the cable connecting the main heat platen to the Digital Combo control panel
2. It is not necessary to physically disconnect the main heat platen from the Digital Combo handle. It is OK to leave it connected to the handle, but unplugged.
3. Plug the Digital Combo female plug into the Full Wrap Mug attachment male plug.
4. You may need to cycle the power off, then back on again.
5. Set the time and temperature on the main Digital Combo control panel to control the mug attachment.
6. Insert a mug and make sure the tension is set for a firm locking pressure, so the transfer paper is snugly pressed against the mug. The handle of the mug should be centered in the opening of the heater.
7. When the Temperature is ready, clamp a mug with transfer paper in the full wrap mug attachment.
8. **TO ACTIVATE THE TIMER** – simply lower the handle of the main Digital Combo press. You do NOT need to clamp the handle, just simply Drop the handle in order to activate the timer on the main control panel.

The Digital Combo Full Wrap Mug Attachment is identical in heating & performance to the DK3 stand-alone mug press. Please see the included DK3 Printing Tips sheet for tips and suggestions for different mug printing challenges that can occur.
